

ABSTRACT OF THE DISCLOSURE

A computer case has a rectangular case section having an open side. All the walls of the rectangular case section are formed of a transparent material to allow individuals to see inside the computer case. The walls of the rectangular case are molded together. A chassis is coupled to an interior section of the rectangular case. The chassis is used for holding computer components inside the computer case. A movable transparent side wall is slidable coupled to the open section of the rectangular case. The movable side wall allows individuals access to the inside of the computer case. A sliding mechanism is coupled to the movable transparent wall for automatically opening and closing the movable transparent side wall.
